

AM-1

Surface Hole Depth Gauge

AM-1 is used to measure the depth of surface holes. It can be used to conveniently and quickly determine the depth of holes or ruts in pavement, gravel, soil, and other surfaces.

The surface hole depth measuring devices include a vertical measuring rod with a scale and base and two bubble inclinometers to properly position the device on the horizontal surface. 0.95m and 1.95m measuring bars help optimize the device for different measurement conditions.

AM-1 Features and Benefits

- Measure hole depth of surface
- Accurate and easy to use
- Includes 2 bubble inclinometers
- Comes with 0.95m or 1.95m measuring bars

| Parameter | Units | Value |
|-----------------------------|-------|--------------------------------------|
| Maximum measuring range | cm | 20 |
| Accuracy | cm | 0.5 |
| Measuring rod base diameter | cm | 3.2 |
| Bar length | m | 0.95 or 1.95 |
| Total weight | kg | 1.48 (0.95m bar) 4.33 (1.95m bar) |
